Syracuse, N. Y.

June 30, 1963

Centuries ago quack doctors believed the body was controlled by a system similar to magnetism. Long discarded as superstition, there is still very little known about the electricity in humans. A Syracuse surgeon, using evidence gained from work with salamanders, like the one shown opposite inside the poles of an electromagnet, has made some exciting discoveries in this brand new field of bioelectronics. Story and pictures on pages 4 and 5.
